

SHELTER®

MEMBRANES

 **UBGEN** | SPECIALISTS OF
BONE SURGERY
IN DENTISTRY

 **MEDICALS** | DENTAL
INTERNATIONAL

THE BEST WAY TO PREDICT THE FUTURE IS TO INVENT IT

The future of membranes according to UBGEN®

SHELTER® SLOW is the first **slow-resorbing bovine pericardium membrane** specifically designed for bone surgery in dentistry and produced by an entirely Italian supply chain.

Unlike our competitors who generally offer **collagen-based** materials extracted from other tissues, or **pericardium of a different origin**, and/or non-resorbable PTFE membranes, we rather offer slow-resorption membranes of bovine pericardium origin that can also replace PTFE solutions in complex regenerations, with the benefits of total resorption.

As shown by studies in cardiac surgery, the bovine pericardium today represents the **gold standard**, due to its higher percentage of collagen and its high resistance when compared with porcine or equine pericardium.

In order to use the bovine pericardium for long resorption solutions, we have developed our **Pericross® production process**, which makes the membrane to be **reabsorbable in longer time** than normal pericardium membranes available on the market. In the **0.8 mm thickness** version, it can replace PTFE options with the advantage of being resorbable.

For our client, this means obtaining a lasting barrier effect: up to six months of occlusivity to the connective cells, without the need of a **non-resorbable membrane** or a pericardium one of another origin.

SHELTER® S (plane photo, 10µm)

Multi-layered structure of the collagen fiber network

SHELTER® S (cross-section photo, 100µm)

Interconnection between the collagen fibers of the membrane

THE REAL INNOVATION FOR MEMBRANES

PERICROSS®

OUR CROSS-LINKING PROCESS THAT
CREATES A LONGER BARRIER EFFECT

Main surgical applications of SHELTER®

1

**MAINTENANCE OF
ALVEOLUS AND
BONE CREST.**

2

**SINUS LIFT
SURGERY.**

3

**PERIODONTAL
REGENERATION
IN INTRA-BONE
DEFECTS AND
TWO-THREE
WALL FURCATION
DEFECTS.**

4

**VERTICAL
INCREASE IN
TWO-WALL
DEFECTS.**

Oralandmaxillofacialsurgery,implantology,periodontics,
endodontic surgery, Guided Bone Regeneration
(GBR) and Guided Tissue Regeneration (GTR),
especially in the maintenance of the post-
extraction alveolus and of the bone crest,
maxillary sinus augmentation surgery,
horizontal increase in two-wall
defects, vertical increase in two-
wall defects, dehiscences
and fenestrations in peri-
implant lesions and
bone regeneration
in periodontal
surgery.

SHELTER® F

Pericardium membrane 50x30x0,4 mm	BMS05F
Pericardium membrane 15x20x0,8 mm	BMS05G
Pericardium membrane 30x25x0,8 mm	BMS05H
Pericardium membrane 50x30x0,8 mm	BMS05I

The choice of the raw material

SHELTER® is made solely from the **pericardium** of cows that are carefully selected by our ISO certified slaughterhouse: it provides us with a pericardium of a maximum of **twenty-four-month age cattle**, born, raised and bred in Italy.

SHELTER® F (cross-section, 100µm)

SHELTER® S (cross-section, 20µm)

SHELTER® S (plane, 10µm)
